

Inspection Agreement

A tool for preventive maintenance

Planned maintenance intervals

Prevention of damages

Scheduled repair works

Minimised shutdown times

Clear cost overview

Application

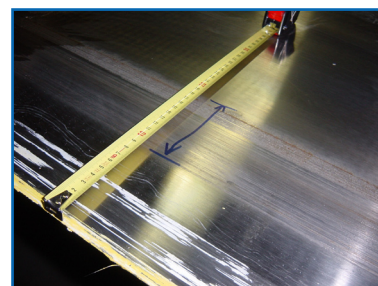

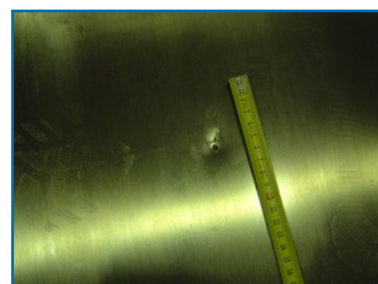

Small scratches, slight deformations and other minor damages do not affect the steel belt's performance immediately. Often such small defects remain unnoticed in a continuous production process.

In order to avoid minor damages to become big problems and to identify possible future hazards, Berndorf Band offers Inspection Agreements. They describe the required scope of work, the time intervals between the inspection visits, and all other relevant items.

The **berntfixx**® inspections are carried out by Berndorf Band service technicians, and followed up by written reports from the Berndorf Band service team.

Advantages

- 1) Fixed and planned inspection intervals
- 2) Fixed and planned inspection costs
- 3) Early identification of belt damages minimise the risk of unplanned shutdowns
- 4) Early identification of misalignments can avoid damage of the steel belt
- 5) Written inspection reports provide a continuous belt and machine history
- 6) Small repairs can be carried out immediately during the inspection
- 7) Big repairs can be scheduled in advance and carried out during planned shutdowns

We are pleased to provide you with detailed information.
